

Atlanta Women's Obstetrics & Gynecology is proud to offer state-of-the-art, 3D and 4D ultrasound services to our obstetric patients.

c.

3D & 4D ultrasound imaging provides expectant parents the opportunity to see their baby for the first time like no other ultrasound technology allows. Images captured during your 3D ultrasound are available as black and white prints, color prints, as images on a CD-Rom . Expectant parents can share the photos with family and friends at baby showers and other family gatherings. The photos make great additions to your baby book and images on a CD-Rom can be easily shared via e-mail and the Internet. In addition to images captured for you to keep, we will provide you the opportunity to see your baby in real-time 4D.

b.

Your ultrasound will be performed by our ARDMS certified sonographer who performs your other obstetric ultrasounds and is therefore familiar with you, your family and baby. Your ultrasound will be conducted in the safe and familiar surroundings of our office. For added convenience, we can coordinate your 3D ultrasound with your prenatal physician visit.

d.

Unlike medically indicated ultrasounds, no fetal measurements or clinical evaluations are performed during your ultrasound allowing you and your family time to enjoy this once in a lifetime experience. The preferred gestational age for fetal portraits is between twenty-six (26) and thirty (30) weeks because amniotic fluid levels are optimal and the fetus has adequate body fat and tissue.

For additional information or to schedule a fetal portrait session please contact our office at 404-352-3616.
